

# Imaging Studio V4

Software Power for your High-Speed Camera

## Get the max

A comprehensive software suite

## Install

Install on as many PC as required, no additional license fee

## Multilingual

Imaging Studio V4 is available in various languages

## Integrate your Camera

Do you want to OEM the software?  
Contact us

**Imaging Studio V4** is a comprehensive software suite designed to meet every requirement for piloting your high-speed camera recordings. Before recording, it offers intuitive control and setup tools; after recording, it provides powerful features such as precise color balancing, point-and-click on-the-spot analysis, and efficient batch conversion for processing large volumes of footage - all just a mouse click away. The software can be installed on any number of PCs for playback (viewer mode) and post-processing.

### Available languages:

English, German, French, Spanish, Portuguese, Korean, Chinese, Czech.

### OEM Imaging Studio

## Setting Up the Camera (Camera Manager)

Setting up the camera and its recording parameters is an easy and intuitive process. Adjust settings by simply dragging sliders with the mouse or by entering exact numerical values.

Manage multiple cameras using a clear, list-style interface. Parameters can be applied to all connected cameras by selecting a main camera and synchronizing its settings across the system.

Configure the On-Screen Display (OSD) using presets such as camera name, resolution, and other information — or add your own custom text and logo.

After recording, playback is controlled just as easily through the same user-friendly interface.

## Powerful Post-Recording Features

With Imaging Studio, powerful post-processing tools are at your fingertips. Color balancing, shadow enhancement, and color temperature adjustment are just a few of the available features.

Export your recordings in common video formats such as AVI, MP4, or as single images for use in third-party motion-analysis systems.

For handling large numbers of files, a batch processing function is available, enabling fully automated processing.

## Point & Click Measurement

Begin a simple yet powerful quantitative analysis just seconds after recording. The point-and-click measurement feature makes it easy to extract precise measurements directly from your footage.

## OEM Imaging Studio
