

# Wireless Trigger

Trigger for sound, light, by App or timer

## Wireless Trigger

Works with all AOS cameras

## Sound

Trigger by sound

## Light

Trigger by light

## App

Trigger by App via Bluetooth

## Wireless Triggering for High-Speed Cameras

Never miss the critical moment.

This is a versatile wireless trigger device ready to server all AOS high-speed cameras. Connected directly to the camera's trigger input, it offers multiple triggering options, including sound, light, laser, or conveniently via a mobile app.

With an ultra-fast response time - typically resulting in just one frame of trigger delay - this is the ideal solution for applications where conventional wired triggering is impractical or impossible.

Whether you are capturing explosions, impact tests, ballistic events, sports analysis, or other unpredictable high-speed phenomena, this device provides the flexibility and reliability needed to record the decisive moment with confidence. It comes with adapter cable for AOS cameras.
